

Made patched firmware KAYA. This is the idea of **VELESOFT** for disabling the **LIST** command in TR-DOS. Everything is detailed [here](#) . I used [the patch version by savelij](#) .

The firmware is on jumper position JP5 10-11.

```
# 0000- # 3FFF Basic 128
# 4000- # 7FFF Basic 48 (HL 'patch)
# 8000- #BFFF Service KRAMIS v.03
# C000- #FFFF TR-DOS v5.04T (HL' patch)
```

Also patched with BASIC\_48 same **VELESOFT** 'Ovsky patch (just in case).

HL rom after returning rom rom. With this patched roms work all tr-dos versions correct. (After break LIST command ZX don't crash after command RETURN).

PATCH IN ZX ROMS:

```
ORG # 2D34
CALL PATCH
```

```
ORG # 3C97; (adress can be different on some ZX roms)
PATCH
EXX
LD HL, # 2758
EXX
JP # 2AB6
```

Firmware checked, everything works awesome! The **LIST** command can now be used fearlessly, interrupting it anywhere and without any problems going through **RETURN** . Firmware attachment.
